PROGRAMMING REFERENCE · FOR PERSONAL TRAINERS

Exercise Substitution Guide

When equipment is limited, injuries arise, or clients need variety — know exactly which alternative exercise to swap in without losing training stimulus.

Upper Body | Lower Body | Equipment-Free Options | Difficulty Rated

Build programs with 1,344+ exercises on EvoFit Trainer — Auto-suggest substitutions for every client

Upper Body — Push & Pull

Use these swaps when equipment is unavailable, technique breaks down, or the client has upper body limitations

PRIMARY EXERCISE	ALTERNATIVE 1	ALTERNATIVE 2	ALTERNATIVE 3	WHY SUBSTITUTE	DIFFICULTY
Barbell Bench Press Primary: Chest · Triceps · Anterior Delt	**Dumbbell Press** Greater ROM, independent arm movement, easier shoulder positioning	**Push-Ups (weighted or elevated)** No equipment; add load via vest or deficit for progression	**Cable Chest Flyes** Constant tension, reduced shoulder impingement risk, good isolation	Shoulder pain, no barbell access, beginner clients, rotator cuff history	EASIER
Pull-Ups / Chin-Ups Primary: Lats · Biceps · Rear Delt	**Lat Pulldown** Adjustable load, same movement pattern, ideal for beginners	**Band-Assisted Pull-Up** Builds confidence on the bar, maintains full ROM	**Inverted Row (TRX / Bar)** Horizontal pulling pattern, scales easily with body angle	Insufficient strength, shoulder impingement, no pull-up bar access	EASIER
Overhead Press (BB) Primary: Anterior Delt · Triceps · Upper Trap	**Landmine Press** Arc path reduces shoulder impingement; great for beginners	**Arnold Press (DB)** Adds rotational component, hits all three delt heads	**Pike Push-Ups** No equipment, trains same pattern, scales with elevation angle	Overhead mobility restriction, shoulder impingement, no barbell access	SIMILAR
Barbell Row Primary: Lats · Rhomboids · Rear Delt · Biceps	**Seated Cable Row** Constant tension, lower back stress reduced, easy load management	**Single-Arm DB Row** Unilateral loading, addresses asymmetries, supports lower back	**TRX / Ring Row** Bodyweight option, core activated, easily adjusted by angle	Lower back pain, no barbell, hip hinge limitation, beginner clients	SIMILAR

Trainer Tip: When substituting, preserve the primary muscle group target — not just the movement pattern. A horizontal push targets chest regardless of whether it's a barbell, dumbbell, or body-weight variation.

Quick Reference: Difficulty Ratings

EASIER — Lower skill/load demand — good for beginners or deload phases

SIMILAR — Same relative demand — direct swap without adjusting intensity

HARDER — Increased demand — use as progression once original is mastered

Lower Body — Squat, Hinge & Lunge Patterns

Maintain lower body stimulus when primary exercises are unavailable or the client has knee, hip, or lower back restrictions

PRIMARY EXERCISE	ALTERNATIVE 1	ALTERNATIVE 2	ALTERNATIVE 3	WHY SUBSTITUTE	DIFFICULTY
Back Squat (BB) Primary: Quads · Glutes · Core · Hamstrings	**Goblet Squat** Anterior load teaches upright torso; perfect for technique correction	**Leg Press** Removes spinal loading; high quad activation; safe for back pain	**Bulgarian Split Squat** Unilateral; greater glute activation; addresses L/R asymmetry	Lower back pain, poor bar position tolerance, limited mobility, beginner	EASIER
Conventional Deadlift Primary: Hamstrings · Glutes · Erectors · Traps	**Romanian Deadlift (RDL)** Removes floor pull; emphasises hamstring stretch under load	**Trap Bar Deadlift** Neutral grip; reduced spinal shear; easier to maintain form	**Hip Thrust (BB / DB)** Maximal glute activation; no spinal loading; knee-friendly	Lower back injury, grip strength deficit, inability to hold neutral spine from floor	SIMILAR
Barbell Lunge Primary: Quads · Glutes · Hip Flexors · Balance	**Step-Ups (DB / BB)** Removed balance challenge; greater glute emphasis; height adjustable	**Static Split Squat** Static base removes walking component; great for knee stability work	**Reverse Lunge (DB)** Reduces anterior knee shear; preferred for clients with knee pain	Knee pain, balance deficit, no barbell, limited space, walking gait issues	SIMILAR

Trainer Tip: Maintain the same weekly volume (sets × reps × load) when substituting. If using an easier variation, slightly increase sets or reps to preserve training stimulus.

Injury-Specific Substitution Rules

Lower Back Pain

→ Replace conventional DL with RDL or hip thrust
→ Replace back squat with leg press or goblet squat
→ Avoid spinal compression movements

Knee Pain / Patellofemoral

→ Replace lunges with reverse lunges or step-ups
→ Reduce squat depth or use leg press
→ Prioritise hip thrust for quad alternative

Shoulder Impingement

→ Replace overhead press with landmine press
→ Replace barbell row with cable row
→ Use neutral grip where possible

Equipment-Based Full-Body Substitutions

Use this section for home workouts, travel clients, or gym members with restricted equipment access

No Equipment (Bodyweight Only)

Zero equipment required · Perfect for home workouts or travel

Chest / Push

- Push-Ups (standard, wide, narrow)
- Decline Push-Ups (feet elevated)
- Archer Push-Ups (unilateral load)
- Pike Push-Ups (shoulder focus)

Back / Pull

- Doorframe Row
- Inverted Row (table edge)
- Superman Hold (posterior chain)
- Scapular Wall Slides

Legs / Lower Body

- Bodyweight Squat → Jump Squat
- Reverse Lunge
- Single-Leg Hip Thrust (floor)
- Nordic Hamstring Curl

Shoulders

- Pike Push-Ups (progression)
- Handstand Hold (wall-supported)
- Y/T/W Raises (prone)
- Band Pull-Aparts (substitute)

Core / Stability

- Plank → Side Plank
- Dead Bug
- Hollow Body Hold
- Bird Dog

Conditioning

- Burpees
- Mountain Climbers
- Jump Lunges
- Bear Crawl

Dumbbells Only

Home gym or limited gym setup · Covers all major movement patterns

Push (Chest / Shoulders)

- DB Bench Press (floor or bench)
- DB Shoulder Press
- DB Chest Fly (floor)
- Renegade Row (push + pull)

Pull (Back / Biceps)

- Single-Arm DB Row
- DB Bent-Over Row (bilateral)
- DB Bicep Curl → Hammer Curl
- DB Pullover (lat emphasis)

Lower Body

- DB Goblet Squat
- DB Romanian Deadlift
- DB Bulgarian Split Squat
- DB Hip Thrust (bench or floor)

Resistance Bands Only

Travel kit or rehab setting · Ascending resistance; excellent for activation work

Push Pattern

- Banded Push-Up (increased resistance)
- Band Chest Press (anchored)
- Band Shoulder Press (standing)
- Band Tricep Pushdown

Pull Pattern

- Band Pull-Apart
- Band Face Pull (anchored high)
- Band Row (anchored low)
- Band Lat Pulldown (anchored above)

Lower Body / Glutes

- Banded Squat (loop above knees)
- Banded Hip Thrust
- Banded Clamshell
- Banded Monster Walk
